Lumenis consultation and treatment

Scheduling a dry eye consultation: This step **MUST** be done first before any treatment for dry eye can begin. Dry eye has many causes and you may not be a candidate for Lumenis IPL treatment but could benefit from another modality. Should you be a candidate, your treatments will be scheduled. You must go onto our website and print the dry eye/Lumenis consultation and skin typing questionnaires. You will not be able to schedule an IPL appointment if these forms are not filled out. Your treatment will **NOT** be performed at this consultation. All paperwork will be reviewed and consents signed.

**** This initial dry eye consultation may be covered by insurance. Please bring any insurance information with you as well as a referral as needed. This visit is NOT considered a routine examination ****

It is recommended that **FOUR (4)** treatments of Lumenis IPL be performed to manage dry eye symptoms in one year spaced 2-4 weeks apart. Any additional treatments can be scheduled or discussed at the time of your visit.

Each visit is \$300.00 per session. You are required to pay for **TWO** of them at your initial visit (Total fee at first visit is \$600.00) This is **NOT** covered by your insurance. The reason for this is that **ONE** treatment, though it may make your eyes temporarily feel better, is not enough to truly manage this condition. Lumenis IPL is the **ONLY** FDA approved IPL for the management of dry eye and a modality that has proven to be very successful in dry eye caused by Meibomian gland dysfunction.

Our success is 100% based on **YOURS**. Dr. McLeod and Dr. Mizerak feel very strongly about this treatment and have brought it into the office to help patients lessen their dependence on drops or other therapies. There is **NO** cure for dry eye but it can be successfully managed with a combination of treatments.

Please email the office at: auburn@mcleodeye.com if you require additional information.

Thank you,

McLeod Eye Associates, P.C.
